

EMPLOYMENT OPPORTUNITY

in the Food Industry

Extrusion Specialist

Ever wonder how Cheezies and Cheerios are made?

The Food Centre is currently seeking an individual to join our food extrusion team. The Food Centre operates a twin-screw extruder to develop new and innovative food products. This position would work in developing new food products from snacks to cereals.

Duties and Responsibilities:

- Implement and evaluate projects with the Program Manager.
- Liaise and collaborate with program partners and industry in the development and implementation of projects.
- Represent organization at various functions and meetings.
- Operate various food manufacturing equipment including an extruder
- Gather, analyse and evaluate technical information
- Assist with data compilation and writing reports

The applicant should be positive, self-motivated with an eager desire to learn. Candidates with interest in engineering, food science or food engineering would find this position very rewarding. Previous experience with strong communication and computer skills would be an asset.

Located at the University of Saskatchewan, the Food Centre offers a competitive salary and an excellent benefits package to qualified candidates.
